ACKNOWLEDGMENT

There is no end to the persons I would like to thank.

First and foremost, I would like to thank my parents, for their unfathomable patience and support. They truly have given me everything I am.

Next, I would like to thank David Icke, whose words set me free and gave me the courage to face with enthusiasm the challenges of life.

My acknowledgement of John Dash goes also beyond the academic and the professional into the personal. Working with him has been a learning experience at all levels. Without his patience and support I would truly not have gone past hooking up the first thermocouple.

I would like to thank too the endearing help and advice I have received from John Warner, Hideo Kozima, Leroy Laush the Silicon God, Marc Nisenfeld, Steve Kaplan, Brian O'Leary, and countless others I have met along the way. I am also very thankful to Pavel Smejtek and Robert O'Brien for their invaluable comments and suggestions.

This work was supported by the New York Community Trust.

INTRODUCTION 1

Historical overview 1

Previous experiments at PSU 6

The present project 12

MATERIALS AND METHODS 13

First experiment 13

Second experiment 15

Post-experiment cathode

Characterization methods 21

RESULTS 22

Thermal results 22

First experiment 22

Second experiment 23

Cathode characterization results 25

Blank piece of unelectrolyzed palladium 25

Cathodes from first experiment 27

H cell cathode 27

D cell cathode 29

Cathodes from second experiment 30

H cell cathode 30

D cell cathode 33

DISCUSSION 38

Thermal factors 38

Thermodynamic considerations 38

Heat results 57

Chemical explanations 65

Nuclear explanations 70

Related results that have been

Reported by other researchers 75
